

Blunt Realities of Club Technology Security in an eWorld

If You Liked the Blair Witch Project, You'll Like This Session - They're Out There, You Just Can't See Them

This fascinating session focuses on a major concern for all private clubs: protecting the club's computer systems from attack. All of the major security topics will be addressed, including: protecting your systems from outside intrusion by hackers, assuring that the club's network is not used to attack others, blocking all forms of malware (viruses, worms, Trojan horses, spyware, key loggers and many other nasty forms of intrusion), taking proper precautions to protect from internal threats, and avoiding identity theft. Don't miss this opportunity to shore up the security of your club's computer systems, and protect your membership's critical data from unseen predators.
